

CRB Cap

Automotive / Drivetrain / Transmission

Print Date: 2024-03-14

Benefits

- CRB Cap is a press fitted cap on the clutch release bearing. The cap comes in contact with the diaphragm spring of the clutch when the clutch is pressed for disengaging the transmission with the engine. This cap isolates metal to metal contact of CRB flange and diaphragm spring fingers.

Details

Isolation of metal to metal contact aids in noise reduction; Wear and durability characteristics are 3 times better in relation with competitive wear resistant grades; Uneven wear of diaphragm spring fingers is nullified, eliminating premature failure of the clutch assembly; CRB flange hardness requirement can be reduced and hardening process for the bearing flange can be eliminated
