Benefits

- Product designers and manufacturers increasingly rely on thermoplastic elastomer (TPE) material solutions to produce and deliver highly durable and high-quality soft touch parts. Compared to the thermoplastic polyurethane (TPU) materials traditionally used for soft-touch manufacturing, TPEs offer better resistance to warpage and fatigue, as well as better protection against UV, chemical, and oil exposure.

Details

Broad tactile properties with superior touch and feel;Broadest operating temperature range from -45°C to 150°C ;High tear and abrasion resistance;High fatigue endurance after 255 compression cycles
