Benefits

 Product designers and manufacturers increasingly rely on thermoplastic elastomer (TPE) material solutions to produce and deliver highly durable and high—quality soft touch parts. Compared to the thermoplastic polyurethane (TPU) materials traditionally used for soft—touch manufacturing, TPEs offer better resistance to warpage and fatigue, as well as better protection against UV, chemical, and oil exposure.

Details

Broad tactile properties with superior touch and feel; Broadest operating temperature range from -45° C to 150° C; High tear and abrasion resistance; High fatigue endurance after 255 compression cycles
