## **SHELF LIFE STATEMENT**

Concerning the allowed storage time of DSM Engineering Materials' **UDea™ Akulon® K20HG60**, the undersigned can state the following:

Material that is stored under ambient conditions will neither show decrease of molecular weight nor chemical reactions. Therefore, there is no loss in original quality of the materials. The material is packed directly after production and delivered in packaging that prevents, but may not completely exclude, moisture absorption.

Moisture absorption is a physical process that is completely reversible by drying, without any negative effect on the polymer or tape. Therefore, regardless of the moisture content, the material is deemed non-perishable and fit for use, consumption, and sale. As such, the concept of shelf life does not apply to DSM Engineering Materials' polymers or tapes.

In case of opened or damaged packaging or other cause of moisture absorption, drying of the tape before processing may be needed. The allowable moisture level for optimal quality is very much dependent on the processing steps and in most cases does not negatively effect the tape processing and quality. Please contact your Account Manager for more information.

This declaration has been prepared and issued to the best of our knowledge and expertise currently available. This declaration replaces all previous declarations relating to this subject.

Hoping to have been of service to you,  
Sincerely yours,

Ron Jenz
